
Each trial: a regular source pair a : b and a target base c of the class shown; the guess b − a + c is ranked against all 334,008 word tokens. Grey tick: the same target verbs with a random word pair as the source. Diamond: the guess is the base itself (no step), base excluded; mean over target verbs. Classes are automatic, not hand-checked. 95% CIs resample target verbs.
